

### Description

Gas Discharge Tube (GDT) is a single-gap or multi-gap switching overvoltage protection device. Under normal circumstances, the GDT is in a high-impedance state; when suffer a surge, the GDT will change from a high-impedance state to a low-impedance state, and release the surge energy to the ground, reducing the residual voltage of the circuit, thereby protecting the equipment circuit or protect the human body from the hazards of transient overvoltage. GDT is formed by high-temperature sealing of metal electrodes, metallized ceramics, inert gas or other mixed gases.

### Features

- Fast Response
- Stable Performance Over Surface Life
- High Current Rating
- Low Capacitance
- High Insulation Resistance
- RoHS & REACH Compliant

### Applications

- Telecom Equipment
- New Energy
- Power supply

### Part Numbering System

**Reminder:**

Part numbering system in the datasheet is only for selecting correct parameter and product features. Before placing order, please contact us for specifications and use the part number and product code in the specifications to place order to ensure the part is correct. Product code is the unique identification.

**Specifications**

Model	D.C. Spark-over Voltage @100 V/s	Tolerance of $V_s$	Impulse Spark-over Voltage @1 kV/ $\mu$ s	Arc Voltage @0.5 A	Impulse Discharge Current @8/20 $\mu$ s	Alternating Discharge Current @50Hz 1 s	Insulation Resistance		Capacitance 0.5 VDC @ 1MHz	Agency Approvals

Note:

1. The above parameters based on ITU - T K12 & IEC61643.311 standards.
2. "●" means GDT has gained the certification.  
"○" means GDT is no certification.
3. Operating Temperature -40 °C ~ +125 °C .

**Electrical Characteristics**

Relationship between Current and Voltage

- $V_s$  : Spark-over Voltage
- $V_{gl}$  : Glow Voltage
- $V_a$  : Arc Voltage
- G : Glow Mode
- A : Arc Mode

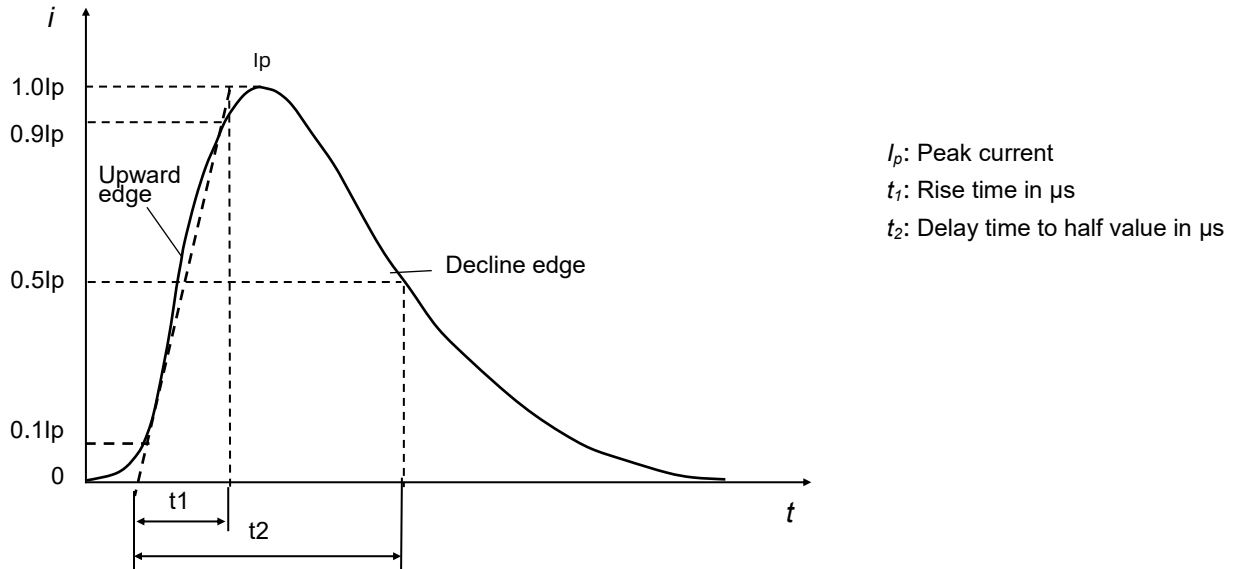

Time Variation Patterns of Voltage and Current

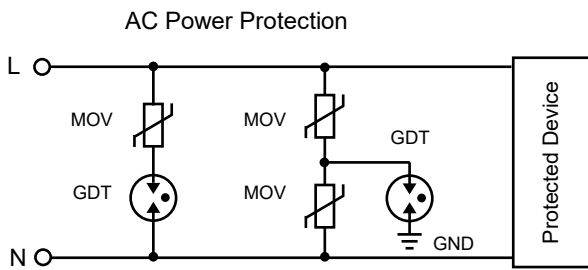

**Reference Curve for Spark-over Voltage (Refer to 230 VDC)**

### Curve for Impulse Discharge Current (For Reference Only)

### Application Example (For Reference Only)

### Recommended Hand-soldering Parameters (For Reference Only)

Items	Condition
Soldering Iron Temperature	350 °C (Max.)
Soldering Time	4 s (Max.)
Space between soldering point and product body	2 mm

### Wave Soldering Parameters (For Reference Only)

Item	Temp. (°C)	Time (s)
Preheating	90 to 150	< 150
Dwelling	255 to 280	3 to 10

## Packaging Information

### PE Box Package (DIP)

Item	PE Box	Inner Box	Carton
Dimensions (mm)	215 × 205 × 10.5	230 × 210 × 60	440 × 250 × 325
Quantity (PCS)	100	500	5000
Notes: Packaging dimensions and quantity are for reference only.			

## Glossary

Item	Description
$V_s$	<p><b>D.C. Spark-over Voltage</b></p> <p>The voltage at which the GDT sparks over with slowly increasing d.c. voltage.</p> <p>— (IEC 61643-311)</p>
$V$	<p><b>Impulse Spark-over Voltage</b></p> <p>The highest Voltage which appears across the terminals of a GDT in the period between the application of an impulse of given wave-shape and the time when current begins to flow.</p> <p>— (ITU-T K.12)</p>
$V_a$	<p><b>Arc Voltage</b></p> <p>Voltage drop across the GDT during arc current flow.</p> <p>— (IEC 61643-311)</p>
$V_{gl}$	<p><b>Glow Voltage</b></p> <p>The peak value of the voltage drop across the GDT when a glow-current is flowing, It is sometimes called the glow mode voltage.</p> <p>— (ITU-T K.12)</p>
8/20 $\mu$ s	<p><b>8/20 Current Impulse</b></p> <p>Current impulse with a nominal virtual front time of 8 <math>\mu</math>s and a nominal time to half-value of 20 <math>\mu</math>s.</p> <p>— (IEC 61643-11)</p>
1.2/50 $\mu$ s	<p><b>1.2/50 Voltage Impulse</b></p> <p>Voltage impulse with a nominal virtual front time of 1.2 <math>\mu</math>s and a nominal time to half-value of 50 <math>\mu</math>s.</p> <p>— (IEC 61643-11)</p>
$I$	<p><b>Alternating Discharge Current</b></p> <p>The r.m.s. value of an approximately sinusoidal alternating current passing through the GDT.</p> <p>— (ITU-T K.12)</p>
$I_n$	<p><b>Nominal Discharge Current</b></p> <p>Crest value of the current through the GDT having a current waveshape of 8/20 <math>\mu</math>s.</p> <p>— (IEC 61643-11)</p>
$I_{max}$	<p><b>Maximum Discharge Current</b></p> <p>Crest value of a current through the GDT having an 8/20 <math>\mu</math>s waveshape and magnitude according to the manufacturers specification. <math>I_{max}</math> is equal to or greater than <math>I_n</math>.</p> <p>— (IEC 61643-11)</p>

# ATTENTION

## Usage

1. Do not operate GDT in power supply networks, whose maximum operation voltage exceeds the minimum spark-overvoltage of the GDT.
2. The GDT may become hot in the event of longer periods of current stress (burn risk). In the event of overload the connectors may fail or the component may be destroyed.
3. If the contacts of GDT are defective, current load can cause sparks and loud noises.
4. When air pressure is from 55 kPa to 106 kPa. The relative altitude shall be +5000 m to -500 m.

## Replacement

The GDT is a non-repairable product. For safety sake, please use equivalent GDT for replacement.

## Storage

The packaged GDT should be placed in a dry, ventilation and non-corrosive environment.

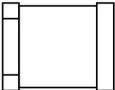

## Installation Position

Do not install the GDT in a touchable position.

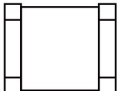

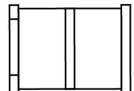

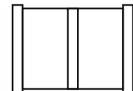

## Mechanical Stress

Do not take violent action such as knocking when assembling, to avoid product failure.
